

Well known aliases

This section houses the set of public aliases for navigation items. By using these aliases to place your items you can ensure they will remain in the correct location, even if the underlying Navigation Paths change.

Call `NavGetItem` passing it the alias to retrieve the handle to the navigation item associated with the alias. Then use that handle as the parent of your own items.

Navigation Tree Aliases

Alias	Description
{ControlPanel}	The <i>Control Panel</i> node in the navigation tree
{Monitoring}	The <i>Monitoring</i> node in the navigation tree
{Utilities}	The <i>Utilities</i> node in the navigation tree
{WebAccess}	The <i>Web Access Control</i> node in the navigation tree
{WebAccessClassifiers}	The <i>Classifiers</i> item under <i>Web Access Control</i> in the navigation tree. If you are writing your own web classifier, then place the navigation tree item under this alias

Help Aliases

If you insert navigation tree items under one of the aliases above and want help pane support for those items then place your help under the corresponding help alias below.

Alias	Description
{ControlPanelHelp}	The help level of the <i>Control Panel</i> node.
{MonitoringHelp}	The help level of the <i>Monitoring</i> node
{UtilitiesHelp}	The help level of the <i>Utilities</i> node
{WebAccessHelp}	The help level of the <i>Web Access Control</i> node
{WebAccessClassifiersHelp}	The help level of the <i>Classifiers</i> node under <i>Web Access Control</i>
