

NetServiceGetUsageLogHandle

Retrieves the usage log [LogHandle](#) registered for the instance of a [NetService](#). The handle is managed by the framework.

Syntax

```
LogHandle WG_API NetServiceGetUsageLogHandle(  
void* pHostContext  
);
```

Parameters

pHostContext
Type: **void ***

The host context relating to this [NetService](#) instance. This host context is passed to you in the [NetServiceCreateInstance](#) callback.

Return Value

Type: **LogHandle**

The usage log [LogHandle](#) associated with this service instance

Remarks

The return value is only valid if the service provider specified `NETSERVICE_FLAG_USAGELOGS` in the flags when registering the provider

Examples

None
