

NavGetItem

Retrieves all or part of a navigation item

Syntax

```
bool WG_API NavGetItem(  
LPCWSTR strFQN,  
NAVSETITEM* pItem  
);
```

Parameters

strFQN

Type: **LPCWSTR**

The FQN of the item to retrieve

pItem

Type: **NAVSETITEM ***

The structure that will receive the information about the item. Only those fields that are specified in `pItem->mask` will be retrieved. The rest will be left unmodified.

Return Value

Type: **void**

If the information was retrieved the return value is true. If the item wasn't found, the return value is false

Remarks

To use this function, set the **mask** field of `pItem` to declare what fields you want retrieved. For a description of the **NAVSETITEM** mask options, see [NavInsertItem](#)

Examples

None
